

Topro Troja Forearm Walker

The TOPRO Troja Forearm Rollator is a sturdy forearm gutter frame walker designed to support your upper body while you walk.

TOPRO's design enables you to walk inside the frame (as opposed to behind it) encouraging you to stand straight, giving good skeletal support, reducing tiredness & muscle strain.

Features

- Best operating comfort
- Light weight and easy to maneuver
- Easy to fold.
- Stands up when folded
- Requires little space when folded
- Good brake function.
- The Topro Troja has a handle height memory function. You can set the height of the handles and the walker will remember the height. When loading into a car lower the handles to make it more compact and when you go to unfold the unit and raise the handles the walker will remember the preset height. Its so easy!

The Topro Troja Forearm Rollator is designed and manufactured in Norway
